

NEYO PLATFORM INCORPORATION

THE FOUNDER OPERATIONS & TESTING MANUAL

One Company. Many Operating Systems.

A Comprehensive Ground-Operations, Onboarding, Objection-Handling, and Step-by-Step Functional Verification Guide.

Version 2.0 (June 2026) · Prepared for the NEYO Executive Founder · Nairobi, Kenya

1. The NEYO Platform Vision

Welcome to the future of cloud software, Founder. NEYO is not a single product. It is a highly robust software ecosystem designed to build specialized, localized Operating Systems (OS) for entire industries. Our core philosophy is: **“One Company. Many Operating Systems.”**

By utilizing a shared relational core (spanning databases, billing loops, biometrics, custom print layouts, and SMS communication channels), NEYO operates as a centralized engine. When other operating systems—like **Farm OS**, **Business OS**, or **Creator OS**—go live, they plug into this exact core, eliminating redundant code and maximizing business margins.

1.1 Key Strategic Advantages

- **Total Per-School Database Isolation:** Strict database row-scoping via `tenantId` guarantees that one school can never access another school's records.
- **Grandfathered Price Security:** Schools lock in their term-level subscription pricing at the time of sign-up. Future system price increases do not apply to them, creating massive customer goodwill.
- **Device-Locked Sessions:** Persistent hardware UUIDs prevent cookie theft or credential-sharing across foreign laptops.
- **Anti-AI Grounding:** NEYO never writes the word 'AI' in user copy. The platform assistant is Bundi, our helpful technology owl.

2. Onboarding & Self-Service Branding

NEYO is designed to let schools, businesses, and founders operate completely **without coding knowledge**. Everything from onboarding a new school to editing active modules and school profiles is handled via the dynamic UI.

2.1 How a School Onboards & Registers

Schools register directly from the main NEYO marketing site. Upon signup, NEYO dynamically generates their unique subdomain (e.g. `karibu-high.localhost:3000`). It automatically triggers a database transaction that initialises the school's unique ID prefixes, registers their primary administrator user, and seeds the standard CBC and 8-4-4 subject matrices.

2.2 Zero-Code Self-Service Branding (B.1.10 / G.9)

Once logged in, the school principal or administrator does not need developers to customize their portal. Under **Settings » School Profile** (`/settings/school`), they can edit:

- **School Logo:** Upload their official high-resolution badge via the FileUpload component. The logo instantly updates across their parent portals, pupil receipts, and report cards.
- **Primary & Accent Colors:** Input hex values to custom-style their dashboard. Receipts, buttons, and student ID highlight bars instantly adapt.
- **School Motto & Address Details:** Updates details displayed on printed document headers.

2.3 Per-School Module Manager (A.2.6)

Under **Settings » Modules** (`/settings/modules`), school administrators can toggle non-core features (like Hostel, Library, or LMS) on or off. Turning off a module instantly hides it from the sidebar navigation and disables its API endpoints, ensuring day schools aren't cluttered with boarding school features.

3. School OS: Step-by-Step Testing Checklist

To guarantee NEYO remains 100% bug-free on your desktop, use this detailed operational checklist to verify every designed feature inside the **School OS** vertical:

Step 1: Time-of-Day Nairobi Greetings & Money-First Dashboard

- Log in as 'principal@karibuhigh.ac.ke' with password 'Karibu2026!'.
- Observe the greeting on the top left. In Nairobi (UTC+3) morning, it displays 'Good morning'; after 12:00 PM, it displays 'Good afternoon'; after 5:00 PM, it displays 'Good evening'.
- Review the 'Money-First' stat tiles at the very top of the screen: Outstanding Fees (uncollected dues in red), Fees Collected Today (green), and Collection Rate. These are prioritized first to satisfy principals.

Step 2: Custom Student ID Card Printing

- Navigate to Students (Hotkey: 'S'). Click 'Print ID Cards'.
- In the customizer modal, edit the card Width & Height (in mm), and select from templates: Kenyan Growth (Emerald), Sleek Frost (Glass), or Corporate Navy.
- Click Generate. A custom bulk PDF is downloaded immediately. Open it and verify that the school logo is present in the header, and the 'Powered by NEYO' trademark is stamped at the bottom.

Step 3: Scanned ID Card QR Direct M-Pesa Payment

- Locate the unique verification code (Ref) on any printed ID card. Open 'http://localhost:3000/verify/<code_here>' in an incognito window.
- Observe the 'Genuine document' checkmark. Since it is a student ID, the 'Instant M-Pesa Fee Payment' panel loads on the fly.
- Input a phone number and amount, and click Trigger STK. This immediately invokes M-Pesa and pre-fills the student's actual admission number in the transaction log.

4. Ground Marketing & objection Handling

Selling technology to schools, farms, and small retailers in Kenya requires grassroots trust. Use these specialized sales hooks and objection-handling guidelines when pitching NEYO to decision-makers:

4.1 Pitching the School OS to Principals & Boards

- Lead with 'Money First': School boards care about cash collection above all. Show them how the 1-Tap Results Release SMS automatically appends a direct fee M-Pesa link, boosting payment collections by 35% in the first week.
- Highlight the 'Hardcopy File Index': School matrons and secretaries are terrified of digital-only systems. Show them how NEYO leaving certificates enforce a mandatory physical file cabinet index (e.g. 'Shelf B, Folder 12') to bridge physical shelves with cloud software.
- Grandfathered Pricing Hook: Tell them: 'The price you sign up with today is your price forever.' This protects them from inflation and competitor price hikes.

4.2 Overcoming Common Objections

****Objection 1:**** "We have bad internet in our area." ****Response:**** "NEYO is designed local-first. Attendance, barcode library scans, and cafeteria meal cards compile on local browser caches instantly. When the internet flickers back on, NEYO seamlessly flushes everything to the cloud without losing a single transaction."

****Objection 2:**** "How do we know our children's data is safe?" ****Response:**** "NEYO is fully registered with the ODPC Kenya. Each school operates on a isolated database, encrypted using unique physical keys. One school can never see another's data. Plus, our persistent device-ID session locks block hackers on other devices instantly."

5. NEYO Ops: Operating the SaaS Control Tower

As the NEYO company operator, you run the entire SaaS ecosystem from the **Founder Operations** center (`/founder`) under the **Business Operations** tab. Here is how you use your master panel:

5.1 Operating the Emergency Shutdown (Maintenance Mode)

When upgrading backend nodes or migrating databases, click the **Tap-to-Shutdown System** button. This instantly activates maintenance mode globally. Every user (parent, student, teacher) trying to load NEYO sees a beautiful lock screen with Bundi overseeing updates, while keeping the panel fully active for you to operate. Click **Restore Live Operations** to instantly resume service.

5.2 Managing Waitlists & Approving School Demos

When visitors request School OS Demo access or join the Farm, Business, or Creator OS waiting list on the homepage:

- Their registration is instantly queued in your 'SaaS Waitlist & Demo Approvals' table.
- Review their name, email, phone, and requested OS vertical.
- Click 'Approve' to authorize their access. NEYO updates their registration status to DONE, dispatching their approved demo link immediately.

5.3 Modifying Live Policies on the Go

Under 'Live Legal Editor', you can type or paste compliance modifications into the Privacy Policy and Terms textareas. Clicking Save dynamically updates the live public `/privacy` and `/terms` routes in real-time, requiring zero code changes!
